

The diagram illustrates a system architecture. A white box on the left is labeled "System" and contains a white diamond shape labeled "Interface A". To the right of the system box is a larger gray box labeled "A/B Interceptor" at the top and "A/C Interceptor" at the bottom. A solid black line connects the "Interface A" diamond to a white arrowhead pointing left, which is part of the "A/B Interceptor". Another solid black line connects the "Interface A" diamond to a black diamond shape, which is part of the "A/C Interceptor". Dotted lines extend from the right side of both the white arrowhead and the black diamond, indicating further connections or data flow.
